Revised Class Diagram

_____We started implementing from our first UML Class Diagram. As we were implementing, we found some flaws and methods that are not logical to implement, thus we changed our design as we were changing our codes. With not much time to implement Deadwood, we changed our design multiple times as we were implementing with our best judgement.. After working through the implementation, our revised design is the latest of multiple previous designs while we were implementing Deadwood. We used UML generator from IntelliJ editor to generate the final UML class diagram from our codes.
